ADITHYAN SURESH

ENTRY-LEVEL SOC ANALYST | CYBERSECURITY & DIGITAL FORENSICS

Changanacherry, Kerala, India | +91 7559959867 | adithyansuresh161@gmail.com

Portfolio: adithyangithub112.github.io/PORTFOLIO | LinkedIn: linkedin.com/in/adithyan-suresh112 | GitHub: github.com/adithyangithub112

PROFESSIONAL SUMMARY

B.Sc. Cyber Forensics graduate with hands-on cybersecurity training focused on security monitoring, threat detection, digital forensics, and incident investigation. Built a Wazuh-based mini SOC lab to review endpoint telemetry, investigate Windows security events, and test custom detections. Also developed Python-based file integrity monitoring with Jira ticketing and a secure Flask authentication application. Seeking an entry-level SOC Analyst or Cybersecurity Analyst role.

TECHNICAL SKILLS

SIEM & Monitoring: Wazuh SIEM, security event monitoring, alert triage fundamentals, custom rule testing

Blue Team & Investigation: Windows event log analysis, authentication event investigation, file integrity monitoring (FIM), threat detection, digital forensics fundamentals

Networking & Systems: TCP/IP, OSI model, TCP client-server communication, Linux, Kali Linux, Windows

Tools: Wireshark, Nmap, Burp Suite, OWASP ZAP, VirusTotal, TryHackMe, LetsDefend, CyberDefenders

Scripting & Web Security: Python, Flask, SQL, SQLite, Pandas, Matplotlib, Git, OTP authentication, password hashing, CSRF protection

PROJECTS

Wazuh-Based Mini SOC Lab for Security Monitoring and Threat Detection

- Connected Windows and Kali Linux agents to a Wazuh manager and monitored endpoint telemetry and security events.
- Investigated Windows successful/failed logon events and tested process and PowerShell-related telemetry; created dashboard visualizations for custom alerts.
- Configured and tested custom detections for repeated SSH authentication failures, new user creation, encoded PowerShell, and suspicious command-shell activity.

File Integrity Monitoring (FIM) with Automated Jira Ticketing

- Developed a Python workflow to generate file-hash baselines and detect added or modified files; integrated detections with Jira ticket creation for follow-up.

Flask OTP-Based Secure Authentication App

- Implemented email OTP verification, Flask-Bcrypt password hashing, CSRF protection with Flask-WTF, and secure session-handling measures.

Security Data Analysis & TCP Client-Server Communication

- Used Pandas and Matplotlib to clean, analyze, and visualize security-related data; built a Python socket-based TCP client/server to exchange messages and explore network communication.

EDUCATION

B.Sc. Cyber Forensics | Mahatma Gandhi University, School of Technology and Applied Sciences | 2022–2025

Cybersecurity Training | Brototype, Kochi | 2025–2026

CERTIFICATIONS

- Mastercard - Cybersecurity Job Simulation, Forage | Oct 2026 - Identified and reported phishing-related threats and analyzed security-awareness training needs.
- Certified Cybersecurity Foundations, Hackviser | Jul 2026 | Credential: HV-CORE-W232B8KD
- Deloitte Australia - Cyber Job Simulation, Forage | Jul 2026 - Reviewed web activity logs and identified suspicious user activity in a breach scenario.
- Certified Cybersecurity Educator Professional (CCEP), Red Team Leaders | Dec 2025 | Credential: 947cce159da16e9e

ADDITIONAL PRACTICAL LEARNING

TryHackMe: SOC Fundamentals, Junior Security Analyst Intro, SOC Role in Blue Team, Vulnerabilities 101, Crack the Hash | LetsDefend: SOC Fundamentals, SIEM 101 | CyberDefenders: PoisonedCredentials Blue Team Lab | Hackviser: Arrow warmup machine | Microsoft Learn: Introduction to Microsoft Defender XDR threat protection | Offenso Hackers Academy: BeEF to Byte webinar
